NTUH Signs MOU on Liver Transplantation Cooperation with Vietnam’s Viet Duc University Hospital

Viet Duc University Hospital is a premier surgical center in Hanoi, Vietnam, as well as the hospital of choice for high-ranking Vietnamese officials. In 2006, NTUH and Viet Duc University Hospital signed an exchange cooperation agreement. In 2007, the NTUH liver transplantation team visited Vietnam to assist Viet Duc University Hospital in performing its first adult living donor liver transplantation, which had received nationwide attention in Vietnam.

Since then, Viet Duc University Hospital has established its own liver transplantation team and has independently conducted numerous liver transplantations. These transplantations were primarily deceased donor liver transplantations, and NTUH’s assistance is required for difficult cases and postoperative care. Hence, Viet Duc University Hospital signed a one-year memorandum of understanding on liver transplantation cooperation with NTUH, and invited NTUH’s liver transplantation team to visit Vietnam to assist the hospital in difficult liver transplantation cases, as well as to provide guidance for postoperative care. On May 31, Prof. Tran Binh Giang, director of Viet Duc University Hospital, visited NTUH to participate in the signing ceremony.
Prof. Shyr-Chyr Chen, the interim superintendent of NTUH, signs MOU on liver transplantation cooperation with the director of Viet Duc University Hospital.
